AI Recommendation Report

Your Group's Tech Profile

- The room is filled with students (6), educators (4), pastors (2), and professionals (2)—a veritable smorgasbord of roles.
- With a tech comfort score of 4.1/5, they're no Luddites; they might even consider upgrading from "tech-savvy" to "tech-cuddly."
- ChatGPT (14) leads the AI parade, followed by Gemini (12), Claude (9), and Copilot (8); clearly a fan club forming.
- They're practically on a first-name basis with AI tools, rivaling most IT departments.

Where Personal Lines Are Drawn

- Personal spiritual practices with AI scored a lukewarm 3.0/5—perhaps they prefer their prayer time without Wi-Fi interruptions.
- A cautious optimism surrounds AI's faith impact at 3.2/5, suggesting AI's divine potential is still under review.
- There's a high concern for AI dependency (3.9/5); they're ready to pull the plug if AI starts getting clingy.
- Emotional support, creative worship, and theological decisions are off-limits for AI, echoing a clear "stay in your lane" message.
- AI's idolatry potential is a whopping 4.3/5, suggesting a fear that AI might steal the show from the divine.

What the Church Should (and Shouldn't) Do

- Operational efficiency with AI scores a divine 4.1/5, proving that even the heavenly hosts approve of streamlined processes.
- Church websites also get a holy nod at 3.9/5, but sermon prep is a 2.3/5, suggesting AI sermons might lack that "fire and brimstone" touch.
- Disclosure of AI use is crucial (4.1/5), so no secret AI sermons, please.
- The church's current position on AI is murky at best, with a 2.3/5 score—time to clear the fog, folks.

Who Should Lead the Response

- A collaborative approach is favored, because apparently, it takes a village to raise an AI.
- There's a solid push for a formal policy (3.7/5), before things get too wild and AI starts rewriting the Ten Commandments.
- A touch of paranoia over mass unemployment (3.5/5) and surveillance (3.7/5)—Big Brother might be watching, and he's made of code.

The Future They're Stewarding Toward

- AI's eschatological significance sits at a middle-ground 3.0/5, indicating a "wait and see" attitude toward Judgment Day, AI edition.

- Egalitarian and Gatekeeper Utopias score highest in desirability (2.6 and 2.8), while AI Dictatorship is the least desirable at 6.4—no surprise there.
- Memorable quote: "AI shouldn't be used to create sermons but for website and social media creation is ok"—priorities, people.

Our Recommendations

1. Clarify the Church's AI Stance

Develop a clear, formal policy on AI use in church activities. The current 2.3/5 clarity score suggests it's time to define what's holy and what's high-tech.

2. Operational Efficiency Blessings

Embrace AI for operational efficiency, where it scored 4.1/5. It's the divine way to streamline without compromising the spiritual essence.

3. Disclosure Is Divine

Always disclose AI involvement in church activities. With a 4.1/5 score on disclosure importance, honesty is the best policy, even with AI in the mix.

4. Set Boundaries for Spiritual Practices

Maintain AI boundaries in personal spiritual practices, given the 3.0/5 comfort level. AI should enhance, not replace, the sacred.

5. Emphasize Collaboration in Leadership

Promote a collaborative response to AI challenges and opportunities. The group prefers a united front, ensuring all voices contribute to shaping the future.
